

Biology / Lesson 01

Photosynthesis

Photosynthesis is the process plants use to convert light into chemical energy.

Study practice includes retrieval, spacing, and reflection.

Compare this concept with the previous lesson in your own words.

Biology / Lesson 02

Respiration

Respiration is the process cells use to release energy from nutrients.

Study practice includes retrieval, spacing, and reflection.

Compare this concept with the previous lesson in your own words.

Biology / Lesson 03

Diffusion

Diffusion is the movement of particles from high to low concentration.

Study practice includes retrieval, spacing, and reflection.

Compare this concept with the previous lesson in your own words.

Biology / Lesson 04

Osmosis

Osmosis is the movement of water across a selectively permeable membrane.

Study practice includes retrieval, spacing, and reflection.

Compare this concept with the previous lesson in your own words.

Biology / Lesson 05

Mitosis

Mitosis is cell division that produces two genetically identical cells.

Study practice includes retrieval, spacing, and reflection.

Compare this concept with the previous lesson in your own words.

Biology / Lesson 06

Meiosis

Meiosis is cell division that produces gametes with half the chromosomes.

Study practice includes retrieval, spacing, and reflection.

Compare this concept with the previous lesson in your own words.

Biology / Lesson 07

Homeostasis

Homeostasis is the maintenance of stable internal conditions.

Study practice includes retrieval, spacing, and reflection.

Compare this concept with the previous lesson in your own words.

Biology / Lesson 08

An enzyme

An enzyme is a biological catalyst that accelerates a chemical reaction.

Study practice includes retrieval, spacing, and reflection.

Compare this concept with the previous lesson in your own words.

Biology / Lesson 09

DNA

DNA is the molecule that carries hereditary information.

Study practice includes retrieval, spacing, and reflection.

Compare this concept with the previous lesson in your own words.

Biology / Lesson 10

A gene

A gene is a segment of DNA associated with a functional product.

Study practice includes retrieval, spacing, and reflection.

Compare this concept with the previous lesson in your own words.

Biology / Lesson 11

A chromosome

A chromosome is a structure made of DNA and associated proteins.

Study practice includes retrieval, spacing, and reflection.

Compare this concept with the previous lesson in your own words.

Biology / Lesson 12

A nucleus

A nucleus is the organelle that contains most DNA in a eukaryotic cell.

Study practice includes retrieval, spacing, and reflection.

Compare this concept with the previous lesson in your own words.

Biology / Lesson 13

A ribosome

A ribosome is the cellular structure that builds proteins.

Study practice includes retrieval, spacing, and reflection.

Compare this concept with the previous lesson in your own words.

Biology / Lesson 14

A mitochondrion

A mitochondrion is an organelle involved in aerobic energy production.

Study practice includes retrieval, spacing, and reflection.

Compare this concept with the previous lesson in your own words.

Biology / Lesson 15

A chloroplast

A chloroplast is the organelle where photosynthesis occurs in plants.

Study practice includes retrieval, spacing, and reflection.

Compare this concept with the previous lesson in your own words.

Biology / Lesson 16

An ecosystem

An ecosystem is a community of organisms interacting with its environment.

Study practice includes retrieval, spacing, and reflection.

Compare this concept with the previous lesson in your own words.

Biology / Lesson 17

A population

A population is a group of individuals of the same species in an area.

Study practice includes retrieval, spacing, and reflection.

Compare this concept with the previous lesson in your own words.

Biology / Lesson 18

A habitat

A habitat is the environment in which an organism lives.

Study practice includes retrieval, spacing, and reflection.

Compare this concept with the previous lesson in your own words.

Biology / Lesson 19

Biodiversity

Biodiversity is the variety of living organisms in an area.

Study practice includes retrieval, spacing, and reflection.

Compare this concept with the previous lesson in your own words.

Biology / Lesson 20

A producer

A producer is an organism that makes organic food from inorganic sources.

Study practice includes retrieval, spacing, and reflection.

Compare this concept with the previous lesson in your own words.

Biology / Lesson 21

A consumer

A consumer is an organism that obtains energy by eating other organisms.

Study practice includes retrieval, spacing, and reflection.

Compare this concept with the previous lesson in your own words.

Biology / Lesson 22

A decomposer

A decomposer is an organism that breaks down dead organic material.

Study practice includes retrieval, spacing, and reflection.

Compare this concept with the previous lesson in your own words.

Biology / Lesson 23

Natural selection

Natural selection is differential survival and reproduction of inherited variants.

Study practice includes retrieval, spacing, and reflection.

Compare this concept with the previous lesson in your own words.

Biology / Lesson 24

An adaptation

An adaptation is an inherited trait that improves fitness in a particular environment.

Study practice includes retrieval, spacing, and reflection.

Compare this concept with the previous lesson in your own words.
